

# FOODDRIVE

## Abstract

Due to current situation of COVID19, government decided to lock down India to stop disease getting spread. Although it is for betterment of citizens there are still many families who earn on daily basis and eat their food but due to lockdown there are many families whose earnings is slowed down or stopped in many ways. For such people food is the must resource to live life. So, NSS unit of LDCE started donating food kits after collecting from donors to the people who really need. So for such a valuable and big task it should also be kept in mind that food kits are donated in very minimum time and communication among NSS team should also be maintained. So, Fooddrive is an android application through which donor can donate food kits, Admin can collect food kits from donor, Admin can assign area in charge and assign deliveries of particular area to that particular area in charge due to which there is a very efficient communication maintained and in minimum time food kits are donated to maximum needy people.

## Flow Chart

## Features

- Attractive and user friendly interface.
- Very Efficient.
- Requires very less memory.
- Dynamic and fast.
- Admin can search kits by dates too.

## Technology

- Android Studio
- XML
- Firebase
- JAVA
